Internship

ITC-PSPD Portal Development

Sarath Kothapalli

Introduction

The ITC PSPD Portal is an internal website for the PSPD Division, serving as a unified interface that integrates various portals. This platform centralizes access to departmental tools, applications, and information.

This being an internal portal, the details and development have not been added here. I have leveraged HTML, CSS, JS, MongoDB and Node.js to bring this project into life.

This is a successfully deployed project

01

Research & Analysis

We gathered feedback on the current portal, Identified common challenges and prepared a problem statement. We have identified frequently used features, and desired improvements.

02

Requirement Analysis

We set primary goals for the redesign: improving user experience, increasing efficiency, and modernizing the design. We listed necessary features and improvements, such as better navigation, a cleaner interface, and enhanced search capabilities.

03

Concept Development

We created sketches and wireframes to outline the basic layout and 2-3 structures of the portal.

04

Prototyping

Developed functional prototypes to provide a more detailed visual representation of the portal using tools like Figma focusing on user flow and navigation.

Design process

01

Navigation Bar on the top which includes: Home, Contacts, Support & Profile options

02

A Search bar that is prominent and easily accessible

03

Row-wise categorization of portals for easier navigation

Design 1

```
graph TD; D1[Design 1] --> 01[01 Navigation Bar]; D1 --> 02[02 Search bar]; D1 --> 03[03 Row-wise categorization]; D1 --> 04[04 Favorites section]; D1 --> 05[05 HR Updates & Holiday Calendar]; D1 --> 06[06 Carousel];
```

04

Favorites section for quick access to the most used portals

05

HR Updates & Holiday Calendar in the side bar

06

Carousel for the category wise navigation bar to accommodate all the sections.

01

A prominent search bar on top allows users to quickly navigate through various portals.

02

Side Navigation Bar provides easy access to essential sections like Home, Contacts, Support, and Profile.

03

The entire page is **scrollable**, ensuring smooth navigation and easy access to all portals

Design 3

04

The profile section is a dropdown menu, providing quick access to user-specific information.

05

Carousels allows users to swipe through portals organized by categories.

06

HR Updates and Holiday Calendar about the latest HR updates and holidays.

Research & Analysis

We gathered feedback on the current portal, Identified common challenges and prepared a problem statement. We have identified frequently used features, and desired improvements.

02

UI/UX and Prototyping

We set primary goals for the redesign: improving user experience, increasing efficiency, and modernizing the design. We listed necessary features and improvements, such as better navigation, a cleaner interface, and enhanced search capabilities.

03

Development

After the finalization of the design, I hopped onto the development part of the project. I have used HTML, CSS, JS, MongoDB and Node.js to implement the idea and develop the portal

04

Deployment

After the development phase, it was tested and successfully deployed into their internal network. Praised by the IT Head and Project Manager of ITC PSPD

Summary

Final reflections

- All these four designs have been made while keeping in mind that the user gets the necessary functionalities and to ensure efficient navigation.
- Each of these designs has enhanced the user interface, reduced complexity and incorporated adaptive design elements to ensure accessibility
- Development has been an amazing learning experience for which helped me to put my skills to a practical use in a real-world environment.

Thank You!
